## DETAILED ACTION

### *Response to Arguments*

1. Applicant's arguments filed 4/3/03 have been fully considered but they are not persuasive. Therefore, this office action repeats and makes FINAL the previous rejections.

As to claims 11-19, examiner has reviewed applicant's arguments citing *Ex parte Porter*, MPEP 608.01(n) (p. 600-76), and MPEP 2173.05(p). *Ex parte Porter* allows a situation where a **dependent method** claim can be dependent from a **parent apparatus** claim, but not "vice versa" as applicant argues for this instant case, where an apparatus claim dependent from a parent method claim specifically as in *Ex parte Lyell*. Therefore, examiner maintains the rejection.

As to claims 1-10, applicant argues that the steps of "providing a range of [known] calibration samples" and then "comparing the said measurement with... calibration samples to determine the degree" of stress are not rendered obvious by the '327 patent. However, the '327 patent provides the same qualitative stress measurement as in the instant case, and then for the motivation of greater precision it is extremely well known, in all sciences, to compare a measurement with known (control) calibration samples to determine a quantitative measurement. Thus, these steps are obvious over the '327 patent and examiner maintains the same rejection, repeated as follows below.

### ***Rejections***

2. The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

3. 35 U.S.C. 101 reads as follows:

Whoever invents or discovers any new and useful process, machine, manufacture, or composition of matter, or any new and useful improvement thereof, may obtain a patent therefor, subject to the conditions and requirements of this title.

4. Claims 11-19 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention; additionally under 35 U.S.C. 101 as the claimed invention is directed to non-statutory subject matter. Claim 11 (and thus also its dependents), as recited, is an improper hybrid of two of the four separate statutory classes of invention (method and apparatus). MPEP 2173.05(p) II.

5. The nonstatutory double patenting rejection is based on a judicially created doctrine grounded in public policy (a policy reflected in the statute) so as to prevent the unjustified or improper timewise extension of the "right to exclude" granted by a patent and to prevent possible harassment by multiple assignees. See *In re Goodman*, 11 F.3d 1046, 29 USPQ2d 2010 (Fed. Cir. 1993); *In re Longi*, 759 F.2d 887, 225 USPQ 645 (Fed. Cir. 1985); *In re Van Ornum*, 686 F.2d 937, 214 USPQ 761 (CCPA 1982); *In re Vogel*, 422 F.2d 438, 164 USPQ 619 (CCPA 1970); and, *In re Thorington*, 418 F.2d 528, 163 USPQ 644 (CCPA 1969).

A timely filed terminal disclaimer in compliance with 37 CFR 1.321(c) may be used to overcome an actual or provisional rejection based on a nonstatutory double patenting ground provided the conflicting application or patent is shown to be commonly owned with this application. See 37 CFR 1.130(b).

Effective January 1, 1994, a registered attorney or agent of record may sign a terminal disclaimer. A terminal disclaimer signed by the assignee must fully comply with 37 CFR 3.73(b).

6. Claims 1-2 and 3-10 are rejected under the judicially created doctrine of obviousness-type double patenting as being unpatentable over claim 1 of U.S. Patent No. 5,619,327.

Art Unit: 2877

Although the conflicting claims are not identical, they are not patentably distinct from each other because it is notoriously well known that any measurement may be calibrated with known samples of known values. Further, it has been held that where the general conditions of a claim are disclosed in the prior art, discovering the optimum or working ranges (e.g., claim 8) involves only routine skill in the art. In re Aller, 105 USPQ 233. Further as to claims 9-10, it has been held that providing automatic means (e.g., digital camera) to replace manual observation in accomplishing the same result, is of routine skill in the art.

### *Conclusion*

7. **THIS ACTION IS MADE FINAL.** Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the mailing date of this final action.
